1.5 From a local or remote HTML file

We can download and extract data about mean sea level stations around the world from the PSMSL website.

```
[13]: # Needs `lxml`, `beautifulSoup4` and `html5lib` python packages
      table_list = pd.read_html("http://www.psmsl.org/data/obtaining/")
[14]: # there is 1 table on that page which contains metadata about the stations_{\sqcup}
       \rightarrowwhere
      # sea levels are recorded
      local_sea_level_stations = table_list[0]
      local_sea_level_stations
[14]:

[15 rows x 17 columns]

1.13 Stack and unstack

Instead of seeing the months along the axis 1, and the cities along the axis 0, let's try to convert these into an outer and an inner axis along only 1 time dimension.

```
[30]: pd.set_option("display.max_rows", 20)
unstacked = french_cities.iloc[:,:12].unstack()
unstacked
```

```
[30]:
            City

1.14 Transpose

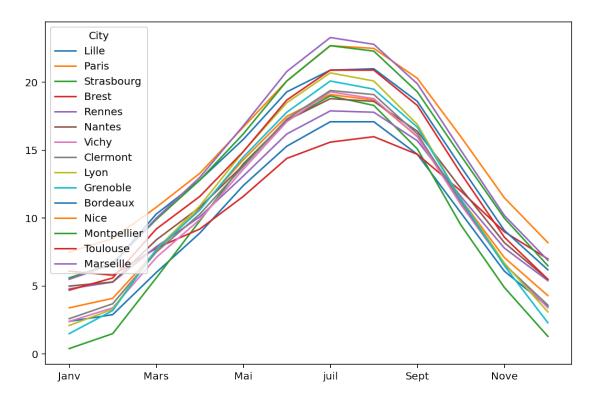

The result is grouped in the wrong order since it sorts first the axis that was unstacked. We need to transpose the dataframe.

```
[32]: city_temp = french_cities.iloc[:,:12].transpose()
city_temp.plot()
```

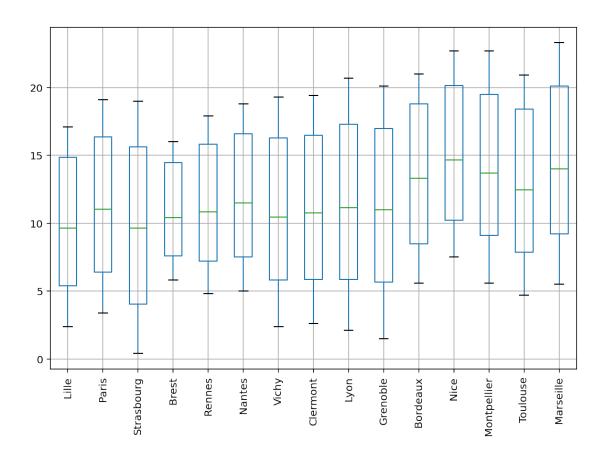

/usr/share/miniconda3/envs/big-data/lib/python3.8/site-packages/pandas/plotting/_matplotlib/core.py:1235: UserWarning: FixedFormatter

should only be used together with FixedLocator
ax.set_xticklabels(xticklabels)

[32]: <AxesSubplot:>

[33]: city_temp.boxplot(rot=90);
